

Leonardo Nkuba

leonkubamn2020@gmail.com | +1 519-902-9106 | London, ON | leonardonkuba.dev | linkedin.com

Summary

Computer Programmer & Analyst student with hands-on experience in full-stack software development, building applications with Java, Python, JavaScript, React, Node.js and relational databases. Experienced in developing front-end and back-end solutions, REST APIs, database integration, automated testing, and Git based version control through professional academic and independent projects. Strong foundation in OOP, data structures and algorithms. Proven communication, teamwork, adaptability and problem-solving skills.

Education

Fanshawe College – London, ON

Sep 2025 – Present

Advanced Diploma, Computer Programming & Analysis – Co-op| GPA: 4.17

Skills

Technology: Full-Stack Development, Object-Oriented Programming, Software Design, Agile Development, Technical Documentation, Debugging, Automated Testing, Version Control, Responsive Web Development

Programming Languages: Java, C++, Python, SQL, TypeScript, HTML, CSS

Frameworks: Node.js, React, Next.js, Express, Spring Boot, Tailwind CSS, Prisma

Software Development: Data Structure & Algorithms, Systems Analysis & Design, SDLC, Agile Workflows, Clean Code, Unit testing

Databases: PostgreSQL, MySQL, Supabase, Relational Database Design, Data Modelling, Google Sheets API

Architecture & Reliability: REST APIs, JWT Authentication, bcrypt, Protected Routes, API Integration, Client/Server Architecture, CRUD Operations.

Experience

Bartender/Host, Mandarin Restaurant Franchise Corporation – On-site

Jan 2026 – Present

- Collaborate with servers, kitchen staff, hosts, and management in a fast-paced team environment to coordinate operations and achieve shared service goals.
- Communicate effectively with customers, coworkers, and management, identifying needs, responding to inquiries, and ensuring information is communicated accurately across teams.
- Apply problem-solving and sound judgment to resolve customer concerns, manage unexpected situations, and maintain efficient operations during high-volume periods.
- Coordinate reservations, seating, waitlists, and front-of-house activities, requiring accurate information management and continuous communication with multiple team members.

Full Stack Developer Intern, Academic Extension Program. – Luanda, Angola

Jul 2025 – Oct 2025

- Developed and enhanced full-stack features for academic and administrative systems using web technologies and relational databases, improving workflow efficiency and supporting staff members across core program operations.
- Designed and optimized database structures, queries, and reporting workflows, improving data accessibility and reducing manual information retrieval time.
- Collaborated with team members to analyze requirements, test and debug application features, and implement maintainable technical solutions aligned with program needs.

Software Developer, Evolvout.Tech – Remote

Dec 2024 – Present

- Develop responsive websites and custom web applications using modern front-end and back-end technologies, translating client requirements into functional and user-focused software solutions.
- Collaborate with clients and team members to gather business requirements, define features, and design technical solutions aligned with project goals.

- Integrate front-end interfaces with back-end services, APIs, and databases to support reliable end-to-end application functionality.
- Participate in Agile development workflows, including feature planning, task prioritization, iterative development, testing, and project delivery.
- Test and debug application functionality to identify issues, improve reliability, and support code quality before deployment while using Git and version control practices to manage code changes, maintain project history, and support collaborative development.

Projects

KixiPay

2026

Digital platform designed to modernize Kixikila community savings groups, improving transparency around contributions, loans, member activity, and financial records.

- Designed and developed a full-stack monorepo architecture using Next.js, TypeScript, Express.js, PostgreSQL, and Prisma, separating web, API, shared UI, types, and utility packages for maintainable and scalable development.
- Built secure backend services with JWT authentication, bcrypt password hashing, protected routes, relational data models, and reporting features to manage savings groups, contributions, loans, and member activity.
- Delivered and deployed a responsive production-ready web application with protected dashboards, real-data reporting, automated testing, and mobile-friendly interfaces, creating a working foundation for transparent digital savings management.

Academic Extension Page

2025

Web platform developed to support PEA's academic and administrative operations, improving access to program information, student data, and digital resources through a responsive web experience.

- Developed and enhanced responsive web interfaces using Next.js and modern frontend technologies, improving navigation, mobile usability, and access to key academic and administrative content.
- Integrated dynamic data and backend services, including API-driven student statistics and Google Sheets data, reducing reliance on manual content updates and improving information accuracy.
- Optimized site structure, routing, and user flows, adding features such as dedicated program pages, improved mobile navigation, and responsive layouts to create a more consistent experience across devices.
